#### LING 334 / CS 396 - Introduction to Computational Linguistics

## Week 1

What is computational linguistics? Course overview and policies, Quest login

#### Who are we? - Instructor

 $Rob \ Voigt$ robvoigt@northwestern.edu

Assistant Professor of Linguistics

#### Who are we? - Teaching Assistants

Grace LeFevre gracelefevre2026 @u.northwestern.edu

> PhD Student in Linguistics

Adrian Ray Avalani arayavalani @u.northwestern.edu

> PhD Student in Linguistics

#### Who are we? - Undergraduate Peer Mentors

Jason Jewell jasonjewell2024 @u.northwestern.edu

#### Senior Ling+Psych Major

Will Cho sungcho2023 @u.northwestern.edu

Senior CS+Ling Major

#### Who is this class for?

- Linguists, social scientists, computer scientists
- Basic programming experience required!
- Basic understanding of probability necessary (or catch up)
- Applications:
  - research in linguistics or social science
  - research in CS / machine learning / neural nets
  - $\circ$  industry jobs and data science

#### Who is this class for? - other relevant classes

- CS 337 NLP CS 449 Deep Learning
- CS 348 AI CS 496 Generative Deep Models
- CS 349 ML CS 497 Deep Learning for NLP
- CS 397 Seminar in

Statistical Language Modeling

#### Who is this class for? - other relevant classes

- LING 330 Stat methods
- Seminars and grad courses I teach here and there, e.g.

Fall '23: Computational Methods for Social Understanding

#### Who is this class for? - note on LLMs

- LLMs = "large language models", e.g. ChatGPT-likes
- This course is not LLMs 101!

More focus on implementing traditional algorithms.

- However:
  - Substantial related lecture material towards the end
  - $\circ$   $\,$  Flexibility to learn more about this on your own

#### When and where will we see each other?

Here in Pancoe Auditorium recorded if you can't make it and for reference Panopto on Canvas

Tuesdays

usually lecture, discussion

Thursdays

more mixed; can be lecture, group work, peer evaluation, extra OH

#### When and where will we see each other?

Office hoursRobTuesdays 10-11am and by apptGraceThursdays 12:30-2:30pmAdrianFridays 10am-noonJasonMondays and Wednesdays 2-4pmWillWill

Ed discussion board for questions Be involved, be interested, help each other out! (quick demo)

# What will we learn?

- Basic problems and algorithms for CL/NLP
- Programming and math (nothing too crazy)
- Historical trajectory, foundations for neural
- Focus on linguistic understanding and applications

#### What is computational linguistics?

The use of computational methodologies to understand language and language use at a large scale The development of algorithms and statistical tools to allow computers to process human languages

Computational Linguistics (CL)

# Natural Language Processing (NLP)

Engineering, Social Science, and beyond Deeply interdisciplinary field - questions like:

How can we build a robot that can talk to us?

How do we organize and access all the information (written in human language) in books and on the internet?

How can computational models represent linguistic ones?

How does language use at a large scale demonstrate aspects of human psychology?

Historically Intertwined → Now Less Clear
Originated with Machine Translation in the 50s
Political/military purposes - translate Russian into English

"We'll have this solved in a decade." ... a few times. Turned out to be a hard problem!

ALPAC Report, 1966 - heavily critical of the progress thus far

(and vice versa)

#### Historically Intertwined $\rightarrow$ Now Less Clear

MT introduced numerous layers of difficulty: lexical, syntactic, pragmatic, contextual

Early work connected with theoretical linguistics more directly:

What is the computational complexity of natural languages?

Computational semantics defining and reasoning with formal representations of meaning (2a) English:

Ron ate a cookie in the Oval Office.

 Historically Intertwined → Now Less Clear
As CL / NLP got more applied (and useful), the link loosened:
1990s - beginning of statistical revolution in NLP rise of machine learning, feature engineering

(field as a whole became much more empirical)

2010s - beginning of neural revolution in NLP rise of vector representations of meaning

(core characteristic is uninterpretable features)

#### Sidenote of Social Importance

CL/NLP is probably among the most gender-diverse CS subfields Many important women historical (and contemporary) figures!

Margaret Masterman

Early MT, notion of "interlingua"

Karen Spärck Jones

Early Information Retrieval, tf-idf

#### Unique Properties of Language (that make it hard)

Polysemy

- 7 always means 7;
- 'Waldorf' can be a hotel, or a school, or a salad, or a muppet
- Ambiguity and VaguenessWe saw her duck... pet? dodgeball?The western part of North America...Wyoming? Manitoba?

Unique Properties of Language (that make it hard) Sparsity Many ways to say "the same thing" Q: Where is he? He went to the store Oh, Johnny left to get groceries Out to grab the essentials

Nested / Recursive / Infinite

Stacey ate the candy that Naveen had found next to the adorable cat statue on the table that had been left out from last week's party where Bill had unexpectedly proclaimed his love for Maurice and ...

19

Unique Properties of Language (that make it hard) These properties (among others) are what make language useful for humans and interesting to study!

#### So in This Class? - Basic Algorithms

Algorithm?

Wikipedia - "finite sequence of well-defined, computer-implementable instructions, typically to solve a class of problems or to perform a computation"

Methods for solving problems! Tend to address some of these common challenges

The building blocks of the CL/NLP "thought process"

### So in This Class? - Programming Skills

Translating conceptual understanding, pseudocode, and math into actual, working code that we can run

More on-your-own than LING331/CS110 etc Still some scaffolding Room to do more complex things on your own

#### So in This Class? - Some Math

Much of contemporary NLP relies on probability

If you have high school math, you can learn it

Probability primer by Sharon Goldwater on course webpage! (very important if your probability is rusty)

#### So in This Class? - Concepts and Applications

Why are we doing what we're doing?

What linguistic phenomena motivate us to do it this way?

Applying methods to real-world datasets!

Error analysis! Ethical concerns!

What will we not explicitly cover? (but you can learn if you're motivated!)

Sequence models

HMMs, CRFs, seq2seq, etc Very important, needs its own class and more math

Implementation and training of neural models

We will cover foundations (classification, vector semantics) and guidance/resources for your own learning

# How will we learn it?

Course structure and policies:

- Schedule
- Assignments
- Grading and Evaluation
- Agreements

#### **Syllabus and Schedule**

Syllabus and policies on course website:

https://faculty.wcas.northwestern.edu/ robvoigt/courses/2024 winter/ling334/

# Learning Structure - Materials All available for free on course website

Starting point using Jurafsky and Martin's Speech and Language Processing

Learning Structure - Assignments
Generally 8-10 days from release to due date, Largely programming, some qualitative aspects
In-class peer review / support / evaluation

at the beginning of class the day after assignments are due

## Learning Structure - Assignments

Structured flexibly to accommodate range of backgrounds:

- Core assignment basics we want everyone to do
  - $\circ$  has corresponding autograder and your first goal is to pass all its tests.
- Extensions various proposed ways to go beyond the basics and learn more
  - can include additional programming, qualitative analysis, reading papers in the field, or whatever you can dream up!

#### Learning Structure - Assignments

You can work on them anyway, anyhow Your own machine, or on Quest, or on Quest Analytics, etc

But your assignments **must** run on Quest

Assignment 0 (very quick) due before class Tuesday - demo

#### Learning Structure - In Class

#### A few group work projects in class Regexes Tuesday!

Regular peer evaluations (focus on understanding and style)

Questions are **always** welcome - please stop me! ... just know with ~100 people I may sometimes have to move on, follow up on Ed and in OH

## Learning Structure - Final Project / Assignment Very open to possibilities! Do something self-directed, fun, exciting!

There will also be an alternative final assignment.

Will discuss in detail again about halfway through - but talk with me and the teaching team at any point about ideas.

### Grading and Evaluation

Heavy emphasis on qualitative feedback where possible, peer support, self-directed learning

We will record completion, passing base auto-grader; then provide qualitative feedback on extensions

Letter grades at the end based on effortful completion, midterm and final self-evaluations (quick demo)

The point of this whole thing is for you to learn, period!

### Flexibility

Class attendance is not strictly required

Deadlines are not strictly enforced however, if submitted greater than a week past the deadline, the teaching team will not review your work

Grading is (mostly) on your own scale relative to your own goals

This is a blessing and a curse! Prioritize appropriately.

Effort and Engagement with learning.

Performance relative to you, not absolute performance.

Challenge yourself.

We have a very broad range of backgrounds and skill levels! You are smart, you are adults -We provide a structure, but it's ultimately on you.

There is a lower bound:

Do basic reading, complete core assignment (make it work and pass auto-grader)

Be present, be engaged, be communicative (if challenges arise you must inform us)

There is no upper bound:

Each week will have extra "relevant readings"

Each assignment will have a number of possible extensions

You can start working early on your final projects

Plus whatever you can dream up

There are no-nos:

Doing the "bare minimum" (relative to you)

Lack of communication

Academic integrity violations

#### Academic Integrity

I will attempt for this to be the only time I talk about this.

Here's the line:

Talking with fellow students about questions so you understand better and work through problems

Looking directly at others' work in order to copy parts of their code, taking credit for things you didn't do

#### Academic Integrity - LLMs, ChatGPT

Here's the line:

Asking questions to help you understand programming or algorithmic concepts, like "how do I use a defaultdict?"

Asking LLMs to generate answers to copy-paste, providing sections of skeleton code to have LLMs fill in

Academic Integrity

In summary:

If it's wrong, don't do it.

If you're unsure if it's wrong, ask.

#### Academic Integrity

Flexibility in structure does not mean flexibility on integrity.

Know that it can be very hard to lie on a self-evaluation.

Cheating and dishonesty are so unnecessary, and just so incredibly *lame*.

Don't Waste Our Time, Don't Disappoint Dwight.

#### Agreements

I see this class as entering into a set of mutual agreements, on top of the basic agreements of the university (like academic integrity and so on)

We're building a community of learners interested in this topic! (I'm a learner too.)

By registering, you agree to certain things -By being the instructor, I agree to certain things.

#### You agree to:

- Invest substantial time and effort in this course this quarter Hold yourself accountable for your own progress Be honest in assignments, self-evaluations Stay on top of your work, and ask for help when needed Be open to constructive feedback Challenge yourself
- Communicate with me when any of the above falls through

#### I agree to:

Invest substantial time and effort in your process of learning Prepare well for class, construct meaningful assignments Make myself available to help Be open to criticism and commentary Provide structures for learning Communicate with you when any of the a (it totally could, I have small kids at h

#### The key idea for me is **mutual respect**.

- I respect your time, intelligence, integrity, and effort.
- I ask you to respect our time, intelligence, integrity, and effort.

W H ARE HERE T()HELP

We're on the same team, this is not an adversarial relationship!

No such thing as a dumb question here.

#### For next time!

Work through the setup in Assignment 0.

Read and get started on regular expressions.

Hooray! Very glad to have you in class.

Have a good weekend.
