Course Overview

Political Science 441 surveys some of the major issue areas and debates in the fields of International and Comparative Political Economy. It is targeted to Ph.D. students in political science, though graduate students from other fields and ambitious and well-prepared undergraduates are welcome to join. Forewarned is forearmed: the reading load is heavy, and I expect that each member of the course will be prepared to discuss each of the readings.

Broadly, the subfields of International and Comparative Political Economy involve the study of how politics, emphasizing power, material interests, institutions, and non-material factors (like ideas, norms, and social conventions), shape and are shaped by market forces (transactions involving goods and services, money and financial assets, firms and factories, and workers). Because I do not regard the disciplinary distinction between IPE and CPE as particularly important, the course includes topics and readings from both subfields.

If there are readings/topics that you would like to cover that are not on this version of the syllabus, please bring them to my attention. I also reserve the right to make changes (with the caveat that you will have plenty of warning if I choose to shuffle readings around). The syllabus is an outline, not a contract, and it is subject to change.

Course Requirements and Grading

Active and thoughtful engagement with the material is essential to success in this course. There are four ways in which I try to measure your engagement with and mastery of the course material:

- (1) *Participation* in the course discussion will account for **25%** of your final grade. The reading load is substantial and the course will be driven by discussions rather than lectures. For these reasons I strongly urge that you attend *all* meetings, arrive on time, and show up well prepared – you must keep up with the readings and be ready to contribute to the conversation to succeed in this seminar.

- (2) All students are required to serve as the *author's defendant* in one course meeting. During the week in which you have been assigned the role of author's defendant, you will be stepping into the shoes of an author of one of the readings assigned for the seminar; you will be responsible for presenting the main arguments and evidence in the reading and will be expected to be prepared to respond to tough questions about the reading that are raised by me and the other members of the group. Your performance as author's defendant will account for **5%** of your grade.
- (3) There are two short writing assignments that you'll complete for the seminar. Each student will write one *critical memo* that outlines the main argument(s) in one *or* several of that week's readings and provides an incisive critique of the material. The critical memo should be submitted via email to me no later than **8 PM** the evening *before* the meeting in which the reading(s) appear. The memo should be in the range of 3-5 pages (though you may go longer if need be). You can write your memo on the same reading(s) for which you are serving as author's defendant. (Efficiency logic suggests that this in fact the best strategy.) The other short writing assignment is a *referee report* that you will produce for one article from the list of assigned readings that you've chosen to review. For the referee report you should approach the article as if it's been submitted for publication at one of the top journals in the field. Your report should inform the journal's editorial team about the key strengths and weaknesses of the piece and provide constructive feedback for the author(s). (I understand that reviewing already-published work that appears on a graduate seminar syllabus is a hard task, given that everything on this syllabus has already made it through the publication gauntlet, but *nothing* is flawless, some well-cited publications are riddled with holes, and all work can be improved through constructive critique.) You'll pick an article from the reading list to review by the second meeting; the referee report can be submitted by **9AM** on the day that we'll be discussing the article you've chosen to review. I'll say more about each of these brief writing assignments in our first meetings of the quarter. The critical memo and referee report together account for **30%** of the final course grade.
- (4) For the remaining **40%** of your course grade you have two options: (a) you may choose to submit a research proposal (likely in the 20-25 page range) that outlines a research puzzle that falls within the purview of I/CPE, situates the puzzle in the relevant literatures, develops a preliminary theoretical argument and observable implications, and sketches how you plan to conduct the research necessary to shed light on the puzzle (what kind of research design will allow you to answer the motivating question?); (b) alternatively, you may write essays based on two field exam-style questions. Like the qualifying field exam, you will get the questions and have a short time period in which to compose your responses. (We will work out a start day and time during finals week and you'll submit your answers in the 36-hour period after you begin the exam.) Unlike the field exam you will have access to your readings and notes and will not be expected to go much beyond the assigned course readings in constructing your answers to the questions.

The due date for the final paper is **Wednesday, December 11**. I should have the paper in my hand by **7:00 PM** on that day. Papers that are submitted after the deadline will be penalized by a half grade (from a B+ to a B, for example) for each 12-hour period that passes after the announced deadline. Barring unusual and challenging personal circumstances, I expect that all students in the course will complete the requirements on time.

Recommended Readings

There is a lengthy list of additional, recommended readings following the assigned readings for each topic. The purpose of the recommendations is to help you (assuming that you are a PhD student in political science) assemble a reading list as you prepare for the qualifying exams in the comparative and IR subfields. You can, of course, dip into the recommended reading list for the seminar meeting but going beyond the assigned reading is not expected.
